

AppendPDF Pro

What Is AppendPDF Pro?

AppendPDF Pro provides a fast and efficient way to create new PDF documents from existing files, dynamically and on-demand. Use it to generate customized reports and personalized marketing materials, or as part of an ISO-compliant process.

Key Features

Enhanced barcode support. Stamp Code 128 barcodes. AppendPDF Pro automatically places the start, check, and stop characters in the appropriate place. Code 128 character set B is embedded within AppendPDF Pro.

New document information. Add information about the new document, including title, subject, keywords, date, and your own custom strings.

Bookmark inclusion. Copy bookmarks from the original documents to your new PDF file, if you wish.

Plain text and XML support. Build your new document by coding parameter specifications in a plain text or XML-formatted file. A DTD is provided for validation of XML parameter files.

Table of contents and cover page. Add a personalized cover page and dynamically generate a table of contents for the new document.

Stamping. Stamp images, watermarks, copyright notices, dates, page numbers, and more into the document using Adobe Base 14 fonts, PostScript Type 1 fonts, or Asian language (CJK) Unicode characters. Stamps can cover multiple lines and be oriented in any direction, including vertical.

Full Acrobat security. Apply 40-bit or 128-bit file encryption to the new document. Set a user password to control who may view, print, or modify a document, and an owner password to control who may change security settings.

Linearization. Optimize output PDFs for faster access and viewing when downloaded from the Web or a network.

Modes of Operation

You can run AppendPDF Pro in a variety of ways:

Basic operations. The simplest way to run AppendPDF Pro is to use a parameter file and no command-line options. You can also run AppendPDF Pro from the command line by using option flags without a parameter file.

Automation options. Dynamically generate parameter files from Perl, Java, PHP, VBScript, or any shell script. AppendPDF Pro can also be scripted for multistage processing and used with Appligent's other products as part of a complete PDF workflow solution.

Optional Web service. Expose AppendPDF Pro functionality to your entire network with APConductor, a separate Appligent Web service product. Use it to programmatically pass the function parameters AppendPDF Pro needs via a single SOAP (Simple Object Access Protocol) call.

Supported Software & Platforms

AppendPDF Pro is compatible with PDF 1.2 and above. It runs on the leading operating systems:

- Windows NT/2000/XP
- Linux
- Solaris
- Mac OS X
- AIX
- HP-UX
- IBM eServer xSeries, iSeries, pSeries and zSeries on Linux

Customer Support

Appligent offers both email and telephone support. As an Appligent customer, you are assured of receiving an email response within 24 hours. Phone support is available between 8 a.m. and 6 p.m. EST.
